SUMMARY

Information Systems student who builds complete products (web, mobile and hardware prototypes) and cares about proving they work, with tests and documented decisions. I use AI coding agents as pair programmers: I define the product, make the architecture calls and verify the result. Looking for my first internship to contribute, learn and grow.

EDUCATION

Bachelor's in Information Systems (Licenciatura)

Universidad Champagnat
2025 – Present

English Language Program

Chacras English Institute
2013 – 2022 · Upper-intermediate (B2)

High School Diploma, Economics

Colegio María Auxiliadora
2020 – 2024

LANGUAGES

Spanish — Native
English — Upper-intermediate (B2)

Francisco Basigalup

SOFTWARE ENGINEERING STUDENT

PROJECTS

MEDITURNOS — MEDICAL APPOINTMENT PLATFORM

Academic project · Full-stack web app · Public code

PHP · MySQL/MariaDB · JavaScript · MVC

- Built from scratch on a custom PHP MVC with PDO and vanilla JavaScript; 99 commits using Git Flow.
- Made double booking impossible at the database level: a UNIQUE index on a generated column rejects the second of two simultaneous bookings.
- Implemented 4 roles with 22 permissions, bcrypt authentication, CSRF protection and a documented threat model.
- Designed 28 tables with stored procedures and triggers; verified with 332 integration checks.

FRONTDESK AI — 24/7 VIRTUAL RECEPTIONIST

Personal project · Live demo on Vercel · Public code

Next.js · React · TypeScript · Tailwind CSS

- Bilingual guided chat on a tested state machine that answers from a curated knowledge base and scores each lead's intent.
- Ports-and-adapters design so an LLM or a database can plug in without UI changes; 32 automated tests.

OTC — BLOCKCHAIN TOURISM MARKETPLACE

Academic team project of 4 · Top contributor (21 of 43 commits)

Next.js · TypeScript · wagmi · Express · ethers

- Built most of the web app and backend on top of a teammate's escrow smart contracts.
- Shipped agent pay links end to end, with integer-only commission math re-validated against the on-chain price.

PEQUEÑITO — POCKET OLED COMPANION

Personal project · Live demo · Public code

Three.js · WebGL · C++ (Arduino) · ESP32-C3

- Code-generated 3D model with 16 animated expressions, validated automatically in CI.
- ESP32-C3 firmware and assembly guide (hardware not built yet).

Also: Vega (offline-first Flutter app with 25 Architecture Decision Records) · MathVoice (accessible math for blind students) · Cortina Lab (automation logic with a 3D simulator).

TECHNICAL SKILLS

- **Languages:** PHP, JavaScript, TypeScript, SQL, HTML, CSS, Dart, Java.
- **Web:** React, Next.js, Tailwind CSS, Three.js.
- **Databases:** MySQL/MariaDB (PDO), PostgreSQL + Supabase, stored procedures, triggers.
- **Tools:** Git & GitHub, Vercel, XAMPP, VS Code, HeidiSQL, AI coding agents (Claude Code, Codex).

STRENGTHS

- Proactive and committed to continuous learning.
- Problem solving and logical thinking.
- Quick to adapt to new technologies and teams.
