SUMMARY

Information Systems student who builds complete products (web, mobile and hardware prototypes) and cares that they work well. I use AI coding agents as pair programmers. Looking for my first internship to contribute, learn and grow.

EDUCATION

Bachelor's in Information Systems (Licenciatura)

Universidad Champagnat
2025 – Present

English Language Program

Chacras English Institute
2013 – 2022 · Upper-intermediate (B2)

High School Diploma, Economics

Colegio María Auxiliadora
2020 – 2024

LANGUAGES

Spanish — Native

English — Upper-intermediate (B2)

STRENGTHS

- Proactive and committed to continuous learning.
- Problem solving and logical thinking.
- Quick to adapt to new technologies and teams.

Francisco Basigalup

SOFTWARE ENGINEERING STUDENT

PROJECTS

MEDITURNOS — MEDICAL APPOINTMENT PLATFORM

Academic project · Full-stack web app · Public code

PHP · MySQL/MariaDB · JavaScript · MVC

A web system for clinics: patients book appointments online by choosing a doctor and a time, and staff manage schedules, payments and medical records by role. It aims to make sure no two patients ever get the same slot and to keep health data protected.

FRONTDESK AI — 24/7 VIRTUAL RECEPTIONIST

Personal project · Live demo · Public code

Next.js · React · TypeScript · Tailwind CSS

A web assistant for dental clinics that answers patients' questions at any hour and records each interested visitor so the team can follow up. It aims to make sure no clinic loses patients for not replying in time.

OTC — BLOCKCHAIN TOURISM MARKETPLACE

Academic team project of 4 · Public code

Next.js · TypeScript · wagmi · Express · Solidity

A platform for selling tour packages in Mendoza where payment is held in a smart contract and split automatically between provider, agent and platform once the service is confirmed. It aims for instant payouts and transparent commissions.

PEQUEÑITO — POCKET OLED COMPANION

Personal project · Live demo · Public code

Three.js · WebGL · C++ (Arduino) · ESP32-C3

A 3D recreation of a keychain with an OLED screen and 16 animated expressions, explorable in the browser, plus the firmware and guide to build it with an ESP32-C3 board. It aims to let anyone build their own.

VEGA — TRAINING AND NUTRITION

Personal project · Mobile app in progress

Flutter · Dart · SQLite · Supabase

An app to log workouts, meals and body progress in one place. It aims to work fully offline, so no data is lost in a gym with no signal.

MATHVOICE — ACCESSIBLE MATH

Personal project · Web app

TypeScript · React · Web Speech API

A math workspace in Spanish that reads results and step-by-step solutions aloud, and lets you explore graphs with sound and the keyboard. It aims to let blind students do advanced math without looking at the screen.

Also: Cortina Lab (roller-blind automation with a 3D simulator) · MzaBeats (team web app to discover bands from Mendoza).

TECHNICAL SKILLS

- **Languages:** PHP, JavaScript, TypeScript, SQL, HTML, CSS, Dart, Java.
- **Web:** React, Next.js, Tailwind CSS, Three.js.
- **Databases:** MySQL/MariaDB (PDO), PostgreSQL + Supabase, stored procedures, triggers.
- **Tools:** Git & GitHub, Vercel, XAMPP, VS Code, HeidiSQL, AI coding agents (Claude Code, Codex).
